Info

I went with this website layout because I'm looking for a more classic looking website design. I took heavy inspiration from both the original website designs for Youtube and Ebay. I wanna stray away from the minimalist design of modern websites. They all feel too similar and lack any personality.

A Lot of design choices here are done for the same reasons as the previous layout but the big difference here is the layout. Instead of the Tabs on the top I went for a homepage that showcases my six pages with slideshows that show off the galleries for each page. I also went with a different font for all the tabs, Bebas Neue Regular.

AP EXAM WORK

This idea is heavily based on the Space Jam website from 1996. It's along the same lines as that old internet theme that my other two web design ideas came from. The plan is to make Original art logos for each tab, kinda like icons.
